DOORWAYS TO EXCELLENCE

Eagle Forgings introduces Huet Acoustic and Fire Rated Timber Door sets in India.

With its proven track record of introducing new and innovative products in the Hotel

and Leisure Industry, eagle Forgings has done it yet again. Recently they have become the preferred & exclusive supplier of acoustic and fire rated door sets of a major company, Huet, that specialises in this area ... Whether it is fire or sound resistant doors, the company has a range of competitively priced products which match most specifications.

As part of JH Industries, Huet Acoustics is one of Europe's largest producers of high performance, fire rated and acoustic rated Timber Door sets. The company has the technical experience to understand the requirements of complex projects, especially in the hospitality sector where safety, durability,

appearance and efficiency of doors is vital for guest satisfaction and security.

A family company trading for over 65 years, the company's advanced manufacturing facilities, technical expertise and formidable customer service bring performance and reliability to any project.

Innovation is the USP

From multi-core door leaves with revolutionary acoustic properties to anti-bacterial door finishes for medical use, research and development is a fundamental part of the products DNA.

Project Specific Production

The company's manufacturing facilities produce door sets to customer requirements. Each year their technical team assesses and arranges tests through third party certified bodies. This allows them not only to meet the ever growing needs of customers, but also to adapt, change and develop products that can deliver quality, performance, reliability and exceed current national and international standards.

The door sets are some of the thinnest available for their acoustic ratings thanks to a unique multicore door leaf design. Thicknesses range from 41mm to 48mm according to the clients' required acoustic/fire rating and configuration.

A Door Set for Every Use

Guest rooms, board rooms, function rooms, meeting rooms single or double doors - with various finish options: real

wood veneers, laminated, lacquered or primed-custom or standard laser engraving - frame wrapped with wood veneer. They even supply encapsulated, environmentally stabilised door sets for use in kitchens, leisure centres and health spas.

Fire-rated and acoustic door sets

Their acoustic door sets (from Rw 32dB to Rw 55dB) have been tested and certified to EN 1634-1 and BS 476 standards for either 30 or 60 minutes fire resistance.

Interior design is extremely important to modern hotel development. To present real life examples and for better understanding of the uniqueness of acoustic and fire rated door sets, the company goes the extra mile by providing a handmade life size mock-up of the actual door during the approval process.

Hoteliers can inspect a sample door set, manufactured and finished to their exact specifications.

Their SAS 52 interconnecting door set is especially designed for interconnecting guest rooms, offering flexibility and privacy as required.

The SAS 52 is designed to be installed back-to-back, one door for each guest room.

All the above products are now available through Eagle Forgings.
